

patrol S

*An ideal radio control for
single-drum winches!*

NEW!

patrol S – pure operating comfort!

HBC-radiomatic's patrol S transmitter is the perfect choice for the safe wireless control of single-drum winches. This new device scores big with its flexibility and lightweight design. In addition to the standard commands for single drum winches, patrol S includes the speed + / - and motor start / stop functions. Optionally, the transmitter can be equipped with intermittent brake and rotary potentiometer for analog functions such as brake or speed. Therefore, the radio control system can perfectly be adapted to the specific needs of the customer.

patrol S comes with robust operating elements and a sturdy weather-proof housing, ensuring a long lifetime of the radio control. The power is provided by a high-performing rechargeable NiMH exchange battery that allows up to 12 hours of continuous operation.

patrol S is perfectly suited for the strict safety regulations of forestry applications. A toggle switch (option: rotary switch) that can easily be operated with work gloves allows the quick activation of emergency calls if necessary. Therefore, the operator can rely on a very high standard of safety.

Details at a glance:

- Up to 6 one-step push buttons or toggle switches.
- Functions speed + / -, motor Start / Stop.
- Toggle or rotary switch for emergency calls*.
- Ergonomic carrying at one's side.
- Weight: approx. 450 grams (0.99 lbs.) only (incl. battery).
- Rechargeable NiMH exchange battery without memory effect.
- Approx. 16 hours of continuous operating time.
- Frequency ranges: 334 – 338 MHz, 400 – 475 MHz, 865 – 870 MHz, 902 – 928 MHz (country-specific frequencies available on request).
- Robust plastic housing, protection class IP 65.
- Applicable to all common winches.
- Options: intermittent brake, continuous rotary potentiometer (e. g. for brake or speed), radiomatic® AFS.
- Recommended receivers: FSE 508, FSE 511.
